The **Canon** IJ Printer offers great printing features and excellent print quality. If you've purchased a Canon iJ printer, you may find it difficult to set it up. You can easily setup your Canon printer by canon.

INSTALL CANON PRINTER SETUP VIA CANON

1. First make sure you have a USB cable.

2. From a web browser, visit the **canon** site and select Setup Network Connection via USB.

3. Go ahead and wait for the **Canon** software to connect your printer to the PC using the USB cable.

4. Press Next and get the driver for your printer and check if you want to connect the printer to a particular network.

5. Then tap on YES and hit the complete button and go to Add Printer option.

6. Tap Add and get the driver from the canon site.

7. Now, go to Device Settings, then to LAN Settings and select Connections.

8. Install Canon drivers, inkjet cartridges and check the connection of your device.

9. Configure the Canon printer and try printing.

HOW TO SETUP CANON PRINTER WIRELESSLY ON WINDOWS?

1. First, setup your printer on a WiFi network.

2. Now, go to canon to download the printer driver.

3. Moving on, go to the downloaded file and double-click on it to install.

4. Now open the Run command by pressing Windows + R keys together.

5. In the Run box, type control/name Microsoft devices and printers and click OK.

6. When the Devices and Printers folder opens on your screen, you will see the Add Printer button.

7. Press the Add Printer button and follow the on-screen instructions carefully.

8. After the process is complete, click OK.

9. Now the ij.start.canon setup process for your **Canon** Wireless Printer on Windows is complete.

10. Try printing a test job and start using your printer to check if the connection is made properly.

11. For more technical support, contact qualified Canon printer technicians at **canon**.
